PROFESSIONAL SUMMARY

Performance-driven Frontend Developer with over 5 years of professional experience architecting data-driven web applications, high-converting digital user experiences, and automated conversion rate optimization (CRO) infrastructures. Adept at accelerating engineering velocity using AI-assisted development workflows (Cursor, custom MCP servers) while independently leading client-facing technical alignment roadmaps and engineering team standardizations.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS, jQuery, AJAX, PHP, React (Basic)
AI-Assisted Engineering: Cursor (AI Editor), Model Context Protocol (MCP), LLM Prompt Engineering, Generative AI APIs
CRO & Low-Code Platforms: VWO, Optimizely, Mutiny, Google Optimize, Verify, HubSpot, Webflow, Unbounce, WordPress
Tools & Core Ecosystems: Git, GitHub, Figma API, Zeplin, Adobe XD, WAMP Server, MySQL, Cross-Browser Compatibility

PROFESSIONAL EXPERIENCE

Frontend Developer **Aug 2022 – Present**
Spiralyze LLC *Atlanta, USA (Remote)*

- Architect and deploy 30+ enterprise-scale conversion landing pages across HubSpot, Webflow, and Unbounce; escalated lead conversions and form submissions by 30% to 45% utilizing structured interface layouts.
- Orchestrate a high-velocity conversion rate optimization (CRO) pipeline running ~4 split-tests weekly utilizing optimization engines including VWO, Optimizely, Mutiny, AB Tasty, and Verify.
- Leverage cutting-edge generative AI workflows, including Cursor and custom LLM interfaces, accelerating engineering development throughput and scaling pipeline asset generation.
- Serve as the primary technical point of contact for premier B2B corporate portfolios; lead technical discovery, risk assessments, and cross-functional design integrations independently.
- Spearhead comprehensive team engineering onboarding cycles, mandate modular code architecture, standardize Figma-to-code workflow frameworks, and execute technical peer code reviews.

Web Developer **Dec 2020 – Jul 2022**
Amla Commerce *Nagpur, MH, India*

- Engineered, compiled, and deployed 7+ responsive cross-platform web applications inside the .NET ecosystem using semantic HTML5, SCSS, JavaScript, jQuery, and dynamic AJAX integrations.
- Optimized web system script delivery and page element painting structures, accelerating core baseline web load performance metrics by 25%.
- Managed active version control branching structures, integration testing environments, and production candidate alignments inside enterprise GitHub repositories.
- Facilitated transparent technical milestone calls with clients to integrate system feature changes, execute interface feedback, and minimize delivery backlogs.

TECHNICAL PROJECTS

Figma-to-Code Autonomous Bridge — *Cursor, MCP Server Architecture, Figma API, Node.js, Claude 3.5 Sonnet*

- Developed a standalone Model Context Protocol (MCP) server integrating vector coordinates directly into Cursor IDE contexts.
- Programmed multi-LLM engineering orchestrations to map layout parameters dynamically into clean semantic web structures.

PixelPerfect: Design Transparency Overlay — *Google Chrome Extension API, JavaScript (ES6+), Web DOM Rendering*

- Engineered a production-tier browser tool mapping custom opacity layout mockups exactly on top of running website viewport layers.
- Created an instantly adjustable visual validation layout canvas enabling rapid alignment tracking across various layout configurations.

EDUCATION

Bachelor of Engineering in Information Technology **Graduation: Oct 2020**
Rajiv Gandhi College of Engineering & Research — Chandrapur, MH, India | **Cumulative GPA: 9.04 / 10**
